

SBC Capacity Development Repository

Find resources to build and strengthen your SBC skills

The repository of SBC capacity development resources is a user-friendly, living dashboard that brings together a curated collection of freely available resources for SBC capacity development. It includes materials from a diverse range of organizations and practices, organized into 8 areas of work, namely:

1. Advocate and build partnerships
2. Applied social and behavioral science
3. Capacity building
4. Design, plan, and implement
5. Digital engagement
6. Generate and use evidence

7. SBC in emergencies
8. Systems strengthening

These areas of work mirror the UNICEF SBC skills mapping survey. When combining both tools, a team or individual can first map their level of skills to identify gaps and prioritize their specific training needs, then use the repository to select capacity development resources to support their skills improvement. The resources can be filtered by text search, type, purpose, language of instruction, and geographic scope.
